

Ruslan Seyidov

Independent On-Site Infrastructure Execution Partner — Azerbaijan

I help international infrastructure teams execute projects in Azerbaijan without operational risk.

I provide on-site execution and operational support for international CDN, carrier, and cloud infrastructure teams operating in Azerbaijan. I act as a single accountable local execution layer, ensuring procedures are followed precisely and on-site work does not introduce delivery or compliance risk.

Core Capabilities

- Data center on-site execution and operations
- Hardware installation, replacement, and physical verification
- Guided troubleshooting with remote NOC / SRE teams
- Infrastructure migrations and coordinated maintenance activities
- Vendor escort and supervision in access-controlled facilities

Why Teams Work With Me

- Single accountable on-site engineer (no rotating teams)
- No reselling, upselling, or commercial conflicts
- Clear communication in technical English
- Strict execution based on provided SOPs and checklists
- Predictable reporting suitable for enterprise ticketing systems

Selected Experience

- Large-scale data center migration involving ~80 racks
- On-site troubleshooting and maintenance for global CDN nodes
- Infrastructure deployments coordinated with remote engineering teams
- Operations inside access-restricted data center environments

Execution Model

Work strictly according to provided procedures and scope. No improvisation. Every task is documented with timestamped photo or video evidence and clear written reporting.

Coverage & Engagement

Location: Baku, Azerbaijan

Engagement: Per-task, planned maintenance windows, or ongoing project support

Availability: Same-day on-site response (subject to access approval)
